Table of Height and Weight

This chart is used as a guideline to identify the weights that are usually acceptable within the rate classes shown, and to show the acceptable weight to qualify for the disability income rider. Other factors, including age or disproportion in body measurements (girth of chest and abdomen), may impact the final decision.

Juvenile Build. Age 15 days through age 15 years Assessing the mortality risk for juvenile height and weight is base percentiles in the growth charts established by the World Health Organization (WHO) -- infant through 24 months -- and Center for Disease Control (CDC) -- 2 years through age 16. Generally, children between the 5th and 104th percentile are eligible for standard consideration. Children greater than 114% are likely to be declined.

Refer to the CDC and WHO web sites for growth charts and for a healthy weight calculator.
